RF Remote Control for Windows 7 & Vista

MODEL NUMBER: ER-V2

Description

The RF Remote for Windows 7 & Vista is a sleek and powerful RF remote control designed specifically for use with Windows 7 & Vista's Media Center multimedia software. It provides more range, convenience and flexibility than infrared remotes.

Features

- Range: The RF Remote for Windows Vista provides a range of up to 90-ft. (27.43 m) (about three times the distance of infrared remotes).
- Convenience: Unlike an infrared remote, this RF remote does not require line of sight to the RF receiver. This allows you to manage Media Center from more areas within the room or even from other areas of your house.
- Flexibility: Since the RF signal works through walls and furniture, you have more flexibility in locating the PC that will be used to run Media Center. For example, you can place the PC inside an entertainment center cabinet or within an AV closet and still easily control Media Center with the remote.
